Centralised Fleet Management

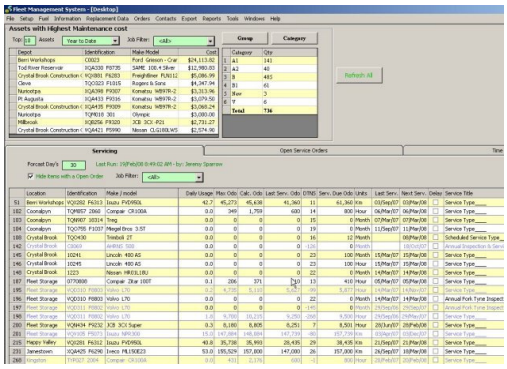
Managing fleet or pool vehicles can be very time consuming and labour intensive. Many people within organisations have *some* knowledge about their immediate division or location fleet but there is often no easy or central access to this information. This can create many issues for businesses.

- Do you have an intimate knowledge of the operational costs of your heavy vehicle and earthmoving assets?
- Can you make sound business decisions with the information you are receiving?
- Is the cost and complexity to operate and maintain your fleet continually increasing?
- How many people do you have managing your heavy vehicles and earthmoving plant?
- What does their activity cost you, and are you receiving accurate and comprehensive fleet data?

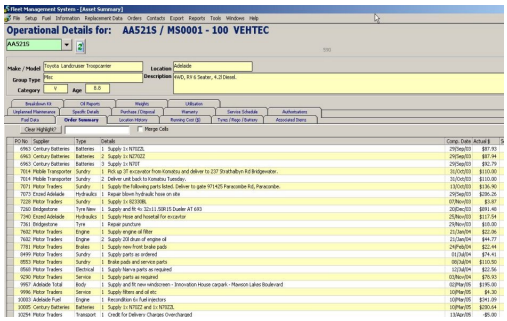
Our customers have also asked themselves these questions. Honestly answering the questions made them feel uncomfortable. By contracting **VEHTEC** to manage their fleet our clients now concentrate on managing their core business and leave the time consuming and complex fleet management to us. That's because it's our core business!

Using our experience **VEHTEC** can actively manage your fleet by providing a full fleet management service incorporating :

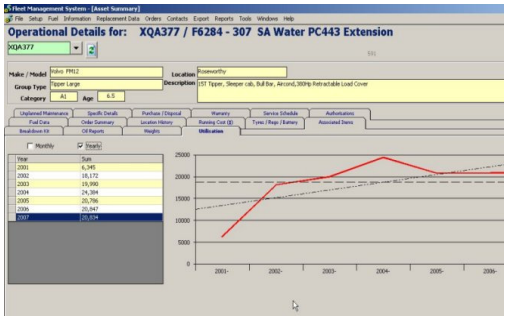
- Procurement via tender, response analysis & recommendation(s) using a specially formulated matrix
- Design and overseeing the manufacture of customised and specialised vehicles
- Conduct plant risk assessment in accordance with the OHS&W Act.
- Arranging delivery, and operator instruction on site
- Liaising with over 500 suppliers across South Australia to ensure your fleet is properly repaired & maintained
- Full decommissioning salvage service to obtain the best return
- Establishing an asset replacement programme
- Proactively managing your fleet by recommending asset relocations to maximise utilisation rates and ensure your assets fulfil their optimal life calculations;
- Vehicle benchmarking against our extensive database



*e*FMS provides a snapshot of the high cost



*e*FMS will record and report on your fleet maintenance costs which can be used to charge back to the cost recovery centre.



*e*FMS will provide utilisation charts to assist
