

# VEHTrac Quick Start guide

Click on the workspace button (Top Centre) as all tasks are accessible from here.

## Task: Plot the vehicles last known position on the map

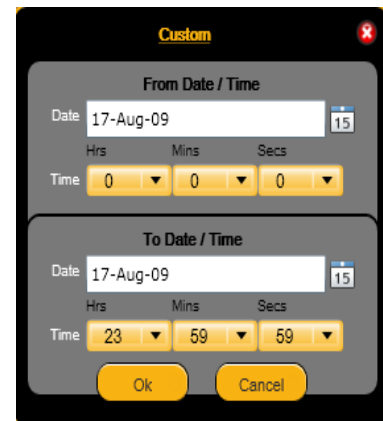

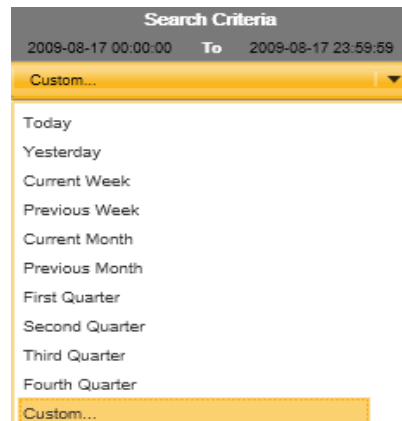

1. Highlight the bash car by clicking on the description (A)
2. Click the Map Setting tab, and click to activate as indicated (B)
3. Click the plot button (C)
4. Once you have completed viewing the vehicle click the  to minimise the digital map

The digital map will zoom in to display the last known position of the vehicle. If the vehicle has been out of digital communications, all vehicle activity data will be stored and transmitted when back in a coverage zone.

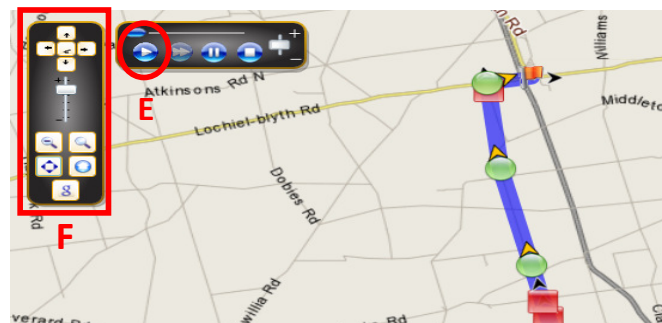

## Task: Find historic trips

1. Follow 1 & 2 as described above
2. Click the Trips button (D) and a search criteria window will open
3. Choose the time period from the drop down list, or customise date & time to suit your needs by filling in the fields
4. Click the Search button, and the list will populate with all trips in the requested date & time period

## Task: Watch historic trips on the digital maps

1. Once the trips are displayed, highlight the trip or trips (Multiple trips can be simultaneously viewed).
2. Ensure boxes are clicked as per (B)
3. Click the plot button (C)
4. The requested trip(s) can be replayed on the map by clicking the  arrow (E) on the replay control. The map will automatically adjust as the vehicle moves along its trip from start to finish.
5. You can navigate around the map using the tool bar (F)
6. Once you have completed viewing the vehicle click the  to minimise the digital map
