

Fleet Management Reporting Suite — eFMS

Using **eFMS**, **VEHTEC's** tried and tested fleet management software, you receive a full suite of reports that provide an in depth assessment and understanding of your fleet assets and their utilisation.

Reports can be scheduled at regular intervals and provide asset data including:

- Maintenance cost & Usage analysis— Providing a cost per basis allowing you to make informed decisions regarding asset suitability or upgrade requirements;
- Planned versus ad-hoc maintenance— highlights areas of high cost through abnormal maintenance expenditure;
- Asset summaries by location— A Snapshot of asset spread for audit, utilisation or fit for purpose assessment;
- Fuel usage data between identical or similar plant, locations or users— assists in identifying poor driver behaviour or vehicle abuse; and
- Supporting asset register— assists in the management of smaller asset associated plant.

eFMS provides a large range of data in an easy to read format that will give full transparency to your fleet and operations.
